PROJECTS

C++ based Data Management System – **Link**   Jan 2025

- **Dynamic Memory Management.**

  The program utilizes dynamic memory allocation (new and delete[]) to handle arrays, allowing flexible creation, resizing, and management of data at runtime.

- **Comprehensive CRUD Operations**.

  It provides complete Create, Read, Update, and Delete functionalities, along with additional operations like search (by value and position), count, reverse, and sort (ascending and descending), offering full control over the dataset.

- **Menu-Driven User Interface**.

  The main control flow is implemented through a do-while loop with a structured menu, enabling continuous user interaction until explicit termination (choice 0 - Exit), ensuring a user-friendly experience.

- **Tools**: VS Code, C++**.**
